LOGO SPECIFICATION & HANDOVER GUIDE

Visual identity • Typography • Color • Construction • Usage • File delivery

Brand LeadScorpio	**Document type** Logo specification and handover
Primary palette Deep Navy · #071525	**Accent palette** Copper · #C65D2E
Source assets PNG artwork supplied	**Font status** Original logo typeface unverified

This document separates observable properties of the supplied artwork from recommendations that should be validated before production.

01 / Logo Concept

LeadScorpio combines a bold wordmark with a distinctive scorpion-tail detail. The visual system pairs a dark navy typographic base with a warm copper accent and a dimensional orange-red symbol.

Visual characteristics

• **Wordmark:** heavy, rounded geometric-looking sans-serif lettering with a compact, confident silhouette.

• **Signature detail:** a segmented copper scorpion tail integrated into the wordmark around the “i” position.

• **Standalone mark:** a glossy orange-red abstract scorpion-inspired form with layered curves, highlights and shadows.

• **Overall contrast:** dark navy lettering balances the warmer, high-energy symbol.

Concept interpretation

The scorpion can be used as a visual metaphor for precision, focus and a memorable point of difference. Treat these as proposed brand-story language, not as a verified business claim.

02 / Logo Components

The supplied assets show a wordmark lockup and a separate dimensional symbol. Use the correct asset for the intended placement.

Primary wordmark

LeadScorpio

Standalone symbol

The symbol PNG has a 1441 × 1091 px canvas. Its visible non-transparent artwork occupies approximately x=111–1353 and y=71–1053, giving a visible artwork ratio of about 1.26:1. These bounds are measured from the supplied file; small antialiased edge pixels may affect the exact bounds.

03 / Typography & Lettering

The original wordmark is supplied as a flattened PNG. Its exact font family and editable text settings cannot be confirmed from this file alone.

Observed wordmark treatment

• Bold, heavy sans-serif lettering with rounded forms and compact spacing.

• “Lead” and “Scorpio” form one continuous brand name; the custom tail detail is visually integrated near the “i”.

• The image can be measured for visible proportions and spacing, but not for the original font's point size or exact tracking value.

Recommended supporting type system (for documents and website text only)

Role	Suggested typeface	Recommended size
Page / document title	Exo 2 Bold or similar geometric sans serif	24–30 pt
Section heading	Exo 2 SemiBold / Bold	16–21 pt
Subheading	Inter SemiBold	12–15 pt
Body text	Inter Regular	10–11 pt
Captions / labels	Inter Medium	8–9 pt

Status: Exo 2 and Inter are recommendations for supporting brand materials, not confirmed fonts used in the logo. If the logo is recreated in a vector editor, the typeface can be identified or replaced with an intentionally selected licensed font.

04 / Color Specification

The core palette is documented from the supplied brand reference. The symbol also contains multiple orange, red and highlight tones that should be treated as a gradient artwork rather than a single flat color.

DEEP NAVY
#071525
Primary

COPPER
#C65D2E
Accent

WARM WHITE
#FAF9F6
Background

Color roles

• Deep Navy: primary wordmark and high-contrast text.

• Copper: brand accent, key highlights and the tail detail in the wordmark.

• Warm White: clean background for presentations and light surfaces.

Symbol gradient

The symbol artwork visibly uses bright orange, amber highlights, saturated orange-red and deep red shadow regions. Exact gradient-stop values have not been defined as brand tokens. Sampled pixel colors may be documented as representative values, but should not be treated as the original gradient specification.

05 / Construction & Proportions

Use the transparent artwork bounds—not the full canvas margins—when comparing logo scale and spacing.

Measured PNG dimensions

Asset	Canvas dimensions	Visible artwork bounds	Visible ratio
Dark-text wordmark	2048 × 740 px	1866 × 439 px	4.25:1
White-text wordmark	2048 × 740 px	1858 × 433 px	4.29:1
Standalone symbol	1441 × 1091 px	1243 × 983 px	1.26:1

Construction rules

• Keep the logo's aspect ratio locked when resizing.

• Do not move the tail independently from the wordmark in the primary lockup.

• Use the transparent bounds to establish consistent margins when placing the logo.

• The exact vector construction, anchor points and original letter spacing are unavailable in the PNG source.

06 / Logo Variations

Use the supplied dark-text logo on light backgrounds and the white-text version on dark backgrounds.

Dark-text version — light backgrounds

LeadScorpio

White-text version — dark backgrounds

A separate icon-only export should be supplied only if the symbol is intentionally exported as its own asset. Avoid cropping the wordmark to create an icon.

07 / Clear Space & Minimum Size

The following are practical usage recommendations. They are not original design measurements.

Clear space

Recommended starting rule: leave padding around the full logo at least equal to the height of the lowercase letters in the wordmark. Increase the space where the layout allows. Do not let text, borders or other graphics enter this zone.

Digital minimum size

Start testing the full wordmark at approximately 180–200 px wide on screen. If the tail detail becomes unclear, use a larger wordmark or a simplified approved asset.

Print sizing

Do not set a universal print minimum from the PNG alone. Test at the actual intended size and output method. A vector version is recommended for large-format printing.

Small-size checks

• Inspect the tail detail at normal viewing size, not only zoomed in.

• Check contrast on both light and dark backgrounds.

• Avoid reducing the dimensional standalone symbol so far that its gradients merge into a single shape.

08 / Correct & Incorrect Usage

Consistency protects recognition. Keep the supplied logo artwork intact unless the client approves a redesigned variation.

DO	AVOID
Use the correct light/dark version.	Stretching or compressing.
Preserve proportions.	Changing colors without approval.
Keep clear space.	Adding effects to the supplied art.
Use high-quality exports.	Using low-resolution artwork for print.

Background guidance

• Dark-text logo: warm white and other light, uncluttered backgrounds.

• White-text logo: deep navy and other dark backgrounds.

• Avoid placing the logo on busy photography without a clear, high-contrast area.

09 / Application Examples

These are suggested placements for the logo, not a claim that the corresponding application artwork is included in the handover.

Website header

Use the full wordmark in the site navigation with sufficient horizontal room and a consistent clear-space margin.

Business card / proposal

Use the primary logo on the cover or top area. Keep supporting text separate from the logo and maintain clear contrast.

Social profile / favicon

Use a dedicated symbol-only asset if one is prepared and tested. The full wordmark may be too detailed for very small circular placements.

Mockup note

Mockups may be added to the document for presentation purposes. They should not be represented as production-ready stationery or website files unless those files are separately supplied.

10 / Technical File Specifications

The supplied artwork consists of PNG images. The details below describe the files provided, not editable source files.

File	Canvas	Alpha channel / background
Dark-text logo	2048 × 740 px	RGBA; transparent pixels present
White-text logo	2048 × 740 px	RGBA; transparent pixels present
Standalone symbol	1441 × 1091 px	RGBA; transparent pixels present
Palette reference image	1774 × 887 px	Opaque image; not a transparent logo asset

Format guidance

• **PNG:** suitable for digital use; supports transparency.

• **SVG:** scalable vector format; not supplied in the current source set.

• **PDF:** can preserve vector artwork when exported from a vector source; embedding a PNG in PDF does not make it vector.

• **Resolution:** pixel dimensions are known, but effective print resolution depends on the final physical size.

• **Transparency:** transparent pixels exist in the logo PNGs. Check the image over a colored background to confirm visual edges.

11 / Final Handover Checklist

Use this list before sharing the logo package with the client.

• Confirm the approved brand spelling and the final logo version.

• Include the dark-text and white-text PNG files.

• Include the standalone symbol PNG if that asset is part of the agreed delivery.

• Keep the palette reference as documentation only, not as a logo export.

• Do not label PNG artwork as an editable vector.

• Confirm the AI tool's commercial-use terms and the usage rights agreed with the client.

• Test the Google Drive link and allow the intended client access.
